AP Calculus Unit 5 – Applications of the Derivative – Part 2

Day 9 Notes: L'Hôpital's Rule

In the same sense, L'Hôpital's Rule uses derivatives to find limits of certain functions, in particular, limits that are of indeterminant form. In our study of limits, we encountered limits of functions that were of this form. When direct substitution is applied to evaluate a limit, results of $\frac{0}{0}, \frac{\infty}{\infty}, \frac{-\infty}{\infty}, \frac{-\infty}{-\infty}, \text{or } \frac{\infty}{-\infty}$ are referred to as indeterminant form.

Let's take a look at an example of those from earlier in the year and remember the methods we used to find the values of these limits.

Try to evaluate the limit below by direct	Direct substitution gave us the indeterminant
substitution of $x = 3$.	form of $\frac{0}{2}$. Algebraically, factor and cancel
$\lim_{x \to 3} \frac{2x^2 - x - 15}{x^2 - x - 6}$	and then find the limit.

L'Hôpital's Rule: Use L'Hôpital's Rule to find $\lim \frac{2x^2 - x - 15}{2x^2 - x - 15}$ in the space below. Compare your result to the

Use L'Hôpital's Rule to find $\lim_{x\to 3} \frac{2x^2 - x - 15}{x^2 - x - 6}$ in the space below. Compare your result to the result above.

Two other limits that we learned earlier were also of indeterminant form. Numerically, we investigated the limits below to find their values.

$$\lim_{x \to 0} \frac{\sin x}{x} = 1 \text{ and } \lim_{x \to 0} \frac{1 - \cos x}{x} = 0$$

In the boxes below, use L'Hôpital's Rule to validate the numerical derivation of the values of the limits above.

Use L'Hôpital's Rule to find the values of each of the following limits.

$\lim_{x \to \frac{\pi}{2}} \frac{-\cos x}{x - \frac{\pi}{2}}$	$\lim_{x \to 0} \frac{7x - \sin x}{x^2 + \sin(3x)}$	$\lim_{x \to 0} \frac{\sin x \cos x}{x + \sin(2x)}$
This example will require multiple applications of L'Hôpital's Rule.		
$\lim \frac{2\cos x - 2\cos(2x)}{2\cos(2x)}$		
$x \rightarrow 0$ $1 - \cos x$		

Now, let's remember how we evaluated limits at infinity. Consider the limit below.

Use L'Hôpital's Rule to find each of the following limits.

AP Calculus AB Unit 5 – Day 9 – Assignment

Name: _____

Use L'Hôpital's Rule to find each of the following limits.

1. $\lim_{x \to 2} \frac{3x^2 - 4x - 4}{x^2 - 4}$	2. $\lim_{x \to \infty} \frac{x^3 - 2x^2}{4x^3 - x - 3}$
3. $\lim_{\theta \to \frac{\pi}{2}} \frac{1 - \sin\theta}{1 + \cos(2\theta)}$	4. $\lim_{x \to 1} \frac{x-1}{\ln x - \sin(\pi x)}$
5. $\lim_{x \to 0} \frac{5x \sin x}{x^2 - \sin(2x)}$	6. $\lim_{x \to \infty} \frac{2x^2 + 3x}{x^3 + x + 1}$

7. $\lim_{x \to 2} \frac{\sqrt{x+2}-2}{x-2}$	8. $\lim_{x \to 0} \frac{\sqrt{x+1} - 1 - \frac{x}{2}}{x^2}$
9. $\lim_{x \to 1} \frac{x \ln x}{x^2 - 1}$	10. $\lim_{x \to 0} \frac{e^x - 1}{2x}$
